## Very low contrast

### What It Means

Very low contrast between text and background colors.

### Why It Matters

Adequate contrast of text is necessary for all users, especially users with low vision.

### How To Fix It

Increase the contrast between the foreground (text) color and the background color. Large text (larger than 18 point or 14 point bold) does not require as much contrast as smaller text.

### The Algorithm...In English

Text is present that has a contrast ratio less than 4.5:1, or large text (larger than 18 point or 14 point bold) has a contrast ratio less than 3:1. WCAG requires that page elements have both foreground AND background colors defined (or inherited) that provide sufficient contrast. When text is presented over a background image, the text must have a background color defined (typically in CSS) that provides adequate text contrast when the background image is disabled or unavailable. WAVE does not identify contrast issues in text with CSS transparency, gradients, or filters. WCAG Level AAA requires a contrast ratio of at least 7:1 for normal text and 4.5:1 for large text.

### WCAG 2.2 Success Criteria:

[1.4.3 Contrast \(Minimum\) \(Level AA\)](#)

## Orphaned form label

### What It Means

A form label is present, but it is not correctly associated with a form control.

### Why It Matters

An incorrectly associated label does not provide functionality or information about the form control to the user. It usually indicates a coding or other form labeling issues.

### How To Fix It

Properly associate the label with its corresponding form control. If there is no corresponding form control, remove the label. Labels are not appropriate for image, submit, reset, button, or hidden form controls.

### The Algorithm...In English

A <label> element:

- does not surround a form control and the for attribute is missing/empty
- references an element that is not present in the page
- references an element that is not an <input>, <select> or <textarea> element
- references an <input> element with image, submit, reset, button, or hidden type

### WCAG 2.2 Success Criteria:

[1.1.1 Non-text Content \(Level A\)](#)

[1.3.1 Info and Relationships \(Level A\)](#)

[2.4.6 Headings and Labels \(Level AA\)](#)

[3.3.2 Labels or Instructions \(Level A\)](#)

| <p><b>What It Means</b><br/>Title attribute text is the same as text or alternative text.</p> <p><b>Why It Matters</b><br/>The title attribute value is used to provide <i>advisory</i> information. It typically appears when the users hovers the mouse over an element. The advisory information presented should not be identical to or very similar to the element text or alternative text.</p> <p><b>How To Fix It</b><br/>In most cases the title attribute can be removed, otherwise modify it to provide advisory, but not redundant information. Note that the title text may or may not be read by a screen reader and is typically inaccessible to sighted keyboard users.</p> <p><b>The Algorithm...In English</b><br/>A title attribute value is identical to element text or image alternative text.</p> |      |                                                                                       |                                                                                       |                                                                                       |

## Redundant link

### What It Means

Adjacent links go to the same URL.

### Why It Matters

When adjacent links go to the same location (such as a linked product image and an adjacent linked product name that go to the same product page) this results in additional navigation and repetition for keyboard and screen reader users.

### How To Fix It

If possible, combine the redundant links into one link and remove any redundant text or alternative text (for example, if a product image and product name are in the same link, the image can usually be given alt="").

### The Algorithm...In English

Two adjacent links go to the same URL.

### WCAG 2.2 Success Criteria:

[2.4.4 Link Purpose \(In Context\) \(Level A\)](#)

## Possible heading

### What It Means

Text appears to be a heading but is not a heading element.

### Why It Matters

Heading elements (<h1>-<h6>) provide important document structure, outlines, and navigation functionality to assistive technology users. If heading text is not a true heading, this information and functionality will not be available for that text.

### How To Fix It

If the paragraph is a section heading, use a heading element instead (<h1>-<h6>).

### The Algorithm...In English

A <p> element contains less than 50 characters and is either:

- 20 pixels or bigger
- 16 pixels or bigger and bold and/or italicized

### WCAG 2.2 Success Criteria:

[1.3.1 Info and Relationships \(Level A\)](#)

[2.4.1 Bypass Blocks \(Level A\)](#)

[2.4.6 Headings and Labels \(Level AA\)](#)

## No heading structure

### What It Means

The page has no headings.

### Why It Matters

Headings (<h1>-<h6>) provide important document structure, outlines, and navigation functionality to assistive technology users.

### How To Fix It

Provide a clear, consistent heading structure, generally one <h1> and sub-headings as appropriate. Except for very simple pages, most web pages should have a heading structure.

### The Algorithm...In English

No <h1>-<h6> elements are present in the page.

### WCAG 2.2 Success Criteria:

[1.3.1 Info and Relationships \(Level A\)](#)

[2.4.6 Headings and Labels \(Level AA\)](#)

## Belotti

## Redundant alternative text

### What It Means

The alternative text for an image is the same as nearby or adjacent text.

### Why It Matters

Alternative text that is the same as nearby or adjacent text will be presented multiple times to screen readers or when images are unavailable.

### How To Fix It

Change either the alternative text or the adjacent text to eliminate the redundancy. In most cases, you can give the image empty/null alternative text (`alt=""`) because the content of the image is already provided in context through text. Linked images may often be combined with the adjacent text into one link, in which case the image may be given null/empty alternative text (`alt=""`).

### The Algorithm...In English

The alternative text is the same as text that is within 15 characters of the image.

### WCAG 2.2 Success Criteria:

[1.1.1 Non-text Content \(Level A\)](#)

## Layout table

### What It Means

A layout table is present.

### Why It Matters

Layout tables exist merely to position content visually - to create columns, insert spacing, or align content neatly for sighted users. Their content is not at all tabular in nature. Layout tables should not be used in HTML5. They can introduce reading and navigation order issues. Screen readers may interpret them as data tables (i.e., announcing column and row numbers), especially if they contain table header (<th>) cells. This introduces significant overhead on screen reader users.

### How To Fix It

In almost every case, layout tables can be replaced with other HTML elements and styled with CSS to achieve the desired visual presentation. If the table contains tabular data, provide appropriate header (<th>) cells. If the layout table remains, verify that the reading and navigation order of table content (based on underlying source code order) is logical and give it role="presentation" to ensure it is not identified as a table to screen reader users.

### The Algorithm...In English

A <table> element is present that does not contain any header (<th>) cells.

## Skipped heading level

### What It Means

A heading level is skipped.

### Why It Matters

Headings provide document structure and facilitate keyboard navigation by users of assistive technology. These users may be confused or experience difficulty navigating when heading levels are skipped.

### How To Fix It

Restructure the document headings to ensure that heading levels are not skipped.

### The Algorithm...In English

A heading level is skipped (e.g., an <h1> is followed by an <h3>, with no intermediate <h2>). Note that an <h1> is not required to be the first heading within the document.

### WCAG 2.2 Success Criteria:

[1.3.1 Info and Relationships \(Level A\)](#)

[2.4.1 Bypass Blocks \(Level A\)](#)

[2.4.6 Headings and Labels \(Level AA\)](#)
